                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

                                          The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                 The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint disease as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                   The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the disgnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. ```
CC The present sequence is that of a novel human growth regulatory-like CC polypeptide (GRLP). The amino acid sequence is predicted from a CC novel assembled cDNA (see AAH26343) based on Hyseq clone number CC 16372272. The protein has a mollwt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins. CC growth factors, human melanoma derived growth regulatory protein CC precursor (64% similarity and 45% identity over 11 amino acids) CC or melanoma inhibitory activity, cattle cartilage-derived Cr etinoic acid sensitive protein (CD-RAP, 44% identity and 64% cartilarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRLP polypeptides and polynucleotides of the invention CC can be used in the prophylaxis, treatment (including gene therapy) CC and diagnosis of disorders and diseases caused by, or involving, CC artilage development and maintenance, inhibition of melanoma cell C glomas. The polypeptides, which include the GRLP mature protein, CC may also have nutritional uses, cytokine and cell proliferation or differentiation activity, istem cell growth factor activity, haematopoiesis regulating activity, tissue growth activity, and treatment of leukaemia, nervous system disorders, and therapy, CC drug screening, receptor/ligand activity, antiinflammatory cartivity, and inflammation of leukaemia, nervous system disorders, arthritics and inflammation

                                                                                    Query Match
                                                                                                                                                       The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal -
                                                                                                                                                                                                                                                                                                                                                                                   16-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2002-171999/22.

                                                                                                                                               ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to CC ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, CC activities, agonists and antagonists are useful for treating or diagnosing croteins, agonists and antagonists are useful for treating or diagnosing cc. e.g. cardiovascular, endothelial or angiogenic disorder in a mammal, CC e.g. cardio, atherosclerosis, hypertension, arterial restenosis, CC rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, CC rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, CC rheumatoid arthritis, angiogenesis (such as breast carcinoma and liver CC carcinoma) and wound healing. The PRO polynucleotides have applications CC in molecular biology, including use as hybridisation probes, and in CC chromosome and gene mapping. ABL88259 to ABL88267 represent primers and CC probes used in the exemplification of the present invention.

```

The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polypeptides, encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating

pericyte cells, for stimulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. AAU83793-AAU83793 represent human PRO protein sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Secreted protein; cytostatic; immunosuppressive; vulnerary; vaccine; antiinflammatory; neuroprotective; nephrotropic; cardiovascular; human; cancer; autoimmune disease; wound healing disorder; infection; haematopoietic disorder; inflammatory disorder; infertillty; neurological disease; psychiatric disease; cardiovascular disease;

The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory diseases, renal diseases, or gastrointestinal diseases. These may also be used to

The present sequence is that of a novel human growth regulatory-like polypeptide (GRLP) mature protein. The sequence is predicted from a novel assembled cDNA (see AAH2634) based on Hyseq clone number 1637272. The protein has a mol.wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64%

The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polymucleotides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the

The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. ARF5963 to ARF5909 and ARB69122 to ARB69132 represent sequences used
      This protein has melanoma-inhibiting activity and can be used to treat cancer (melanoma, glioblastoma, neuroblastoma, small cell lung cancer, neurosctodermal tumours) or as an immunosuppressant (it inhibits IL-2 or phycohaemagglutinin induced proliferation of peripheral blood lymphocytes). Antibodies raised against the protein can be used to detect cell producing the protein and also for protein purification. Probes derived from DNA encoding the protein (AAQ84051), AAQ84051) can be used to detect sequences encoding the protein (CAQ84050, AAQ84051) can be used to detect sequences a fusion protein (conjugated with dihydrofolate reductase (DHFR)).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SS
CC antigen, for manufacturing a preparation against inflammatory diseases of tolerance in patients suffering from or susceptible to inflammatory considerance in patients suffering from or susceptible to inflammatory considerance in patients suffering from or susceptible to inflammatory considerance of MIA is useful as a therapeutic substance and is useful for manufacture of pharmaceutical preparations against confidence of inflammatory disease, such as an immune-cell mediated cartillage confidence of disease, specifically rheumatoid arthritis, autoimmune confidence of disease, internation arthritis, symmary confidence, myasthenia gravis, Addison's disease, primary biliary sclerosis, convertis, systemic lupus erythematosis, inflammatory bowel disease, confidence immune system intact as compared to the non-specific suppressive effect on the autoreactive T-cells thus leaving the other components of the immune system intact as compared to the non-specific suppressive effect on the autoreactive T-cells thus leaving the other components of the immune system intact as compared to the non-specific suppressive continuous professive difference of immunosuppressive drugs. The present sequence represents a formation of immunosuppressive drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MIA; melanoma inhibiting activity protein; antiinflammatory; human; antiarthritic; antirheumatic; antithyroid; osteopathic; nephrotropic; immunosuppressive; ophthalmological; dermatological; antidiabetic; neuroprotective; immune tolerance; T-cell tolerance.
                                                                                                                                                                                                                                                                                                                                             The invention relates to the use of melanoma inhibiting activity (MIA) protein and/or its fragments that have anti-inflammatory effects and induce systemic immune tolerance or specific T-cell tolerance to MIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of melanoma inhibiting activity protein or its derivatives as immune modulatory agents for the treatment of inflammatory diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-JAN-2002
